

of-the-Art

Hindley's got it all!

We are a company driven by the highest quality standards. Certified as an ISO9002 company.

We have met stringent international management and manufacturing standards.

Our facilities include a wide range of production equipment, machinery to perform secondary operations, engineering department, sampling capabilities, an extensive tool room and a modern quality control department.

Hindley Manufacturing's wire hardware and special wire parts to all of North America, as well as Europe and Australia.

Style

Hindley's got it!

Custom Wire Forms are Computer Designed by Hindley engineers to provide high quality, cost effective solutions for a broad spectrum of applications. Often, a slight dimensional modification, change in configuration or material variation from Standard Product Specs. saves time and money. For complex designs, the experience gained by developing many thousands of special parts is used to convert innovative design concepts into finished components. Hindley designers combine years of tooling know-how with a variety of processing techniques. Working with wire dimensions from 1/32" to 5/8" in steel, brass, copper, bronze, aluminum, monel and stainless steel, skilled equipment operators employ over 100 pieces of automated machinery for primary forming and the addition of special secondary features.

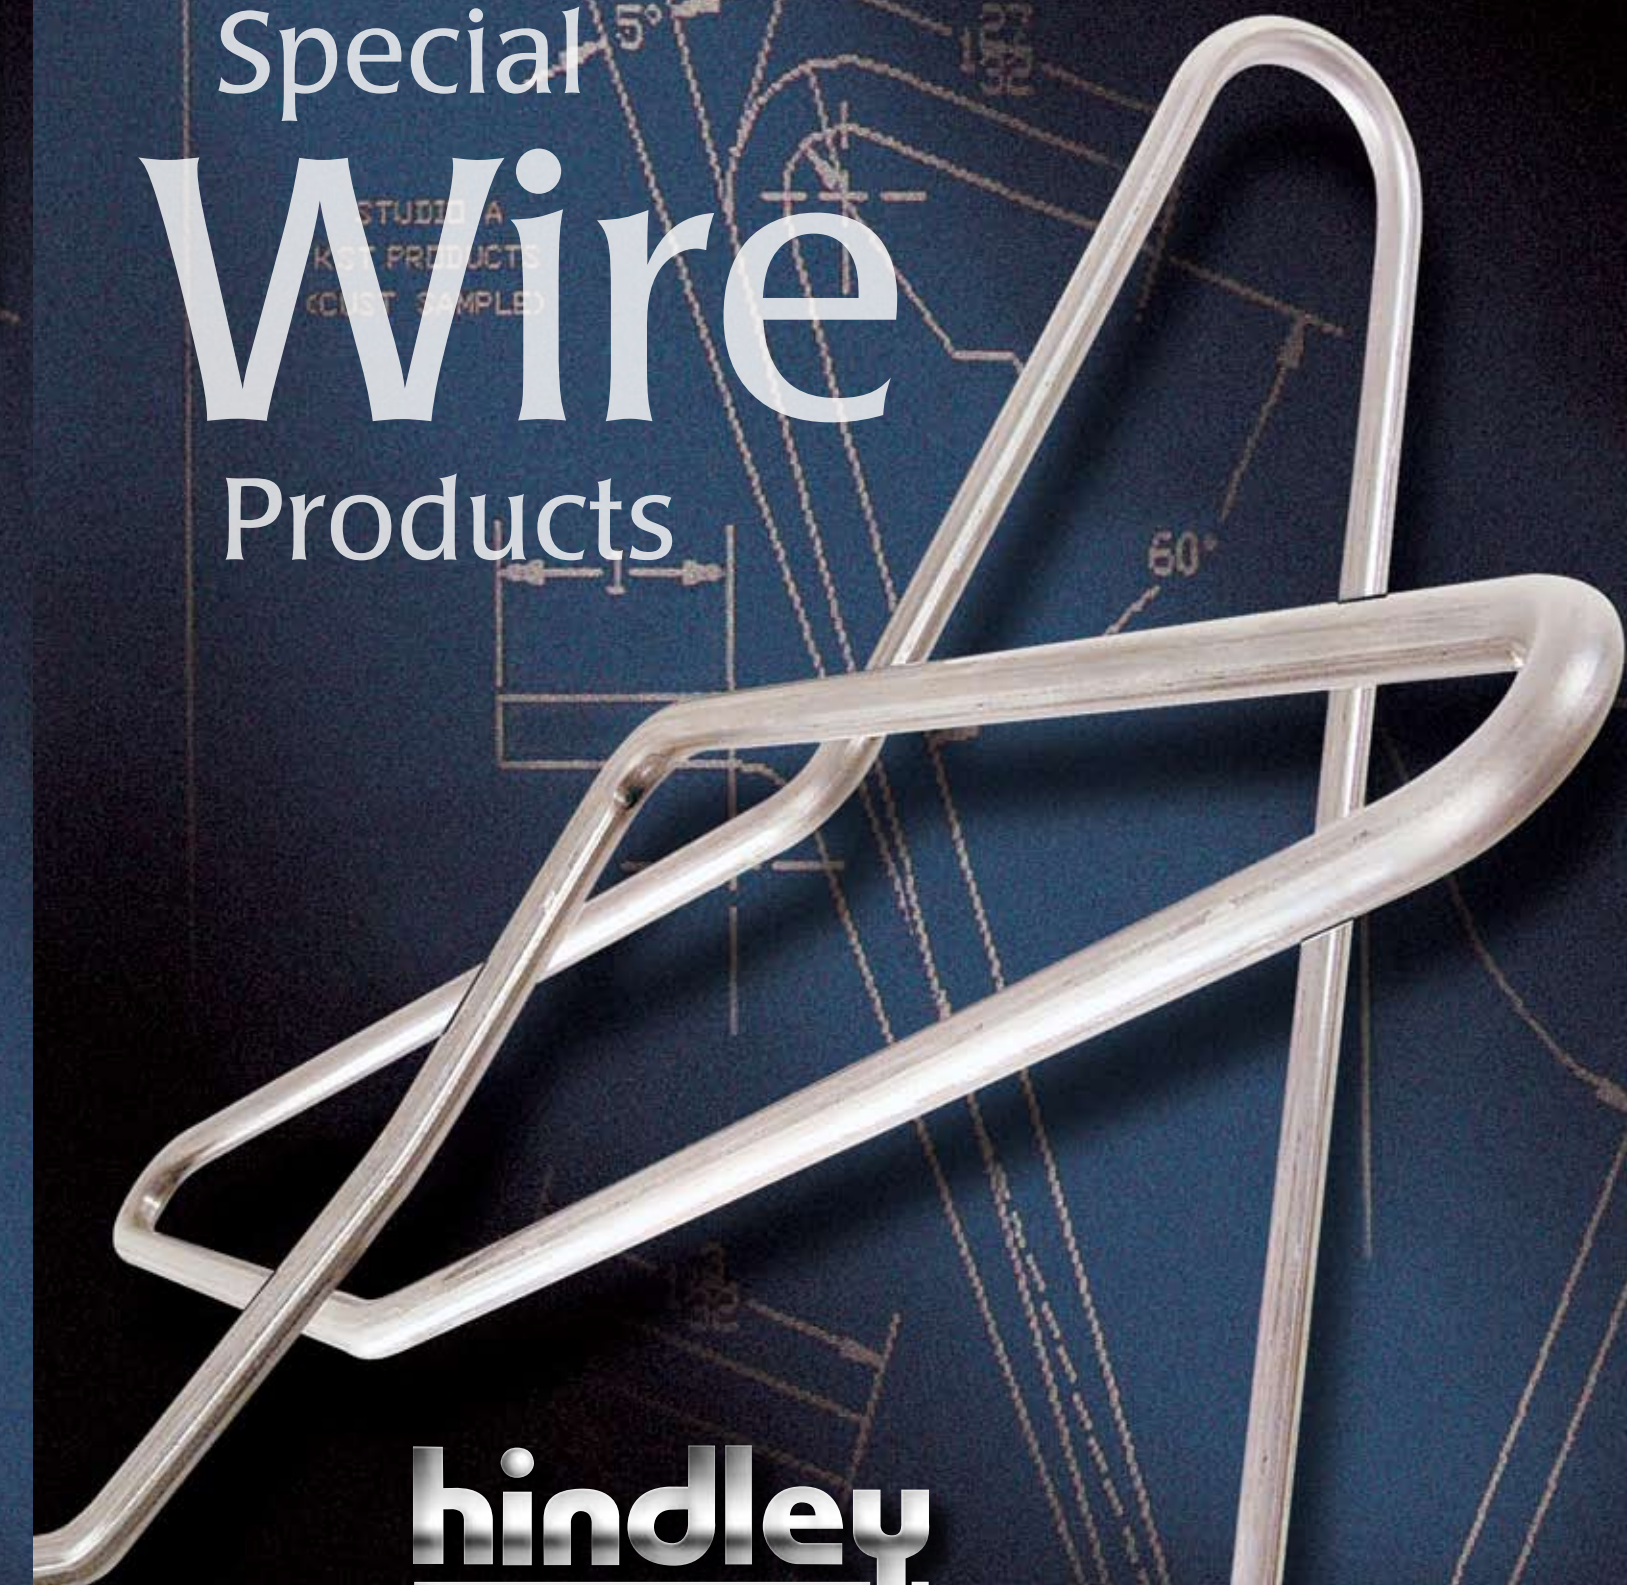

All Weather Stainless Steel manages the elements with Hindley's newly expanded line of 300 Series Stainless Steel Wire Hardware.

Hindley also provides heat treating and a wide variety of finishes for corrosion protection and enhanced appearance. Prototype, short and long run orders all receive the careful attention of our fully staffed Q. C. Department.

from Wire

Reliable

Since 1897, Hindley

has been manufacturing standard wire hardware and special wire parts to exacting tolerances for a wide variety of industries including aerospace, recreation, medical, electro-mechanical, food service, appliance, hardware, communications, and transportation industries. Our commitment to excellence has earned us a reputation as a leading manufacturer of high quality special wire parts.

With our modern wire drawing equipment and fully automated machinery, we can efficiently produce both high and low volume orders. Samples and prototypes can also be inexpensively produced. If tooling is required, our experienced tool makers can produce the necessary tools to manufacture your special wire parts.

Quality control measures are implemented throughout the entire production process. Incoming raw materials are inspected and full traceability of materials can be provided. Statistical process controls are employed to ensure that your special wire parts meet your exact specifications.

State-of-the-Art

With over 100,000 sq. ft.,

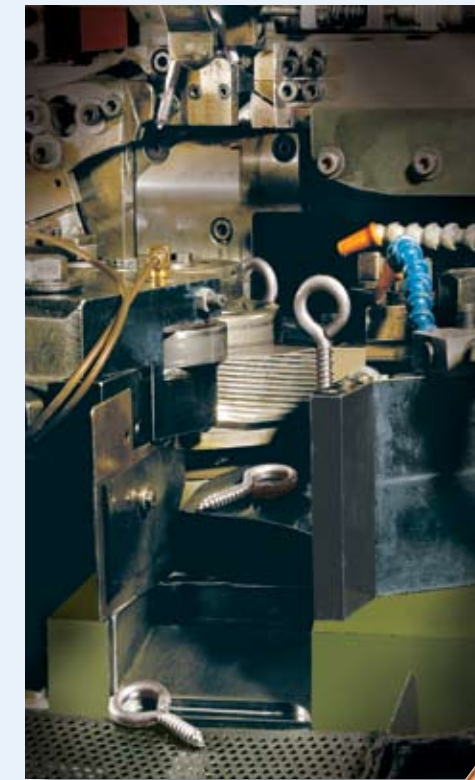

of manufacturing space and over 100 machines, Hindley can fabricate parts that meet your specific requirements. Our capabilities include forming wire in diameters from 1/32" to 5/8" and flat stock in various widths and gauges.

Our state-of-the-art forming machines automatically fabricate parts from flat, round or shaped materials such as high and low carbon steel, stainless steel, monel, brass, copper, bronze and aluminum.

A wide variety of secondary operations can also be performed including:

- threading (machine, wood screw and annular)
- broaching
- chamfering
- knurling
- pointing
- groove rolling
- swaging
- drilling & tapping
- milling
- flattening
- welding
- punching
- slotting
- heat-treating
- wire shaping

Our knowledgeable sales staff and our highly skilled designers and engineers can work with you to help design your part and in some cases, recommend low cost alternatives. Blueprints, sketches or samples can be mailed or faxed and price and delivery information can usually be quoted within 24 hours.

Give us a call today at 1-800-323-9031 and our friendly sales staff will be eager to assist you.

Standard Product Line

In addition to manufacturing specially designed parts, Hindley manufactures a wide variety of standard wire parts, many of which are in stock.

Often, both time and money can be saved by using these standard designs. The following diagrams are provided as a convenient reference when ordering.
